

Empower your teams with the Professional Skillset

Our syllabus develops the skills and expertise that empower CAs to lead the economies of tomorrow. Now, with our new Professional Skillset courses, you and your teams can develop these skills and expertise in-house and stay ahead of key issues like data analytics, innovation, and sustainability.

Sustainability for Accountants

Develop an awareness of the environmental, social and governance impacts on organisations and their links to the broader business agenda.

Why it's important for your organisation:

Sustainability is an essential focus for all organisations, with consumers and investors increasingly making decisions based on the approach to ethics and the environment. Enhancing your non-financial reporting to allow stakeholders to assess the wider value beyond financial performance will help your organisation do right by profits and the planet.

Innovation for Growth and Transformation

Develop the practical skills and leadership mindset to help your organisation continuously innovate, transform and grow.

Why it's important for your organisation:

In a fast-moving business environment, organisations that aren't innovating will quickly get left behind. Give your teams the tools and strategies needed to keep pace with the competition.

Data Analytics and Insights

Understand the crucial role of the data scientist in business.

Why it's important for your organisation:

Data is the most valuable resource in the modern business environment. Your organisation's success is tied to having teams who understand how to use that resource to enable better decision-making and generate improved outcomes.
